Abstract (en)

[origin: EP2182162A2] The housing has two lateral head pieces (1) including a set of guiding units that run parallel to each other and perpendicular to a lower side (3). Two intake guides (2) have another set of guiding units that run parallel to each other. The guiding units of the sets correspond with each other such that the intake guides are alternatively inserted from the lower side into multiple spaced-apart positions, in a form-fit manner. The intake guides are connected with the head pieces and laterally guide a roller shutter shell.
