Abstract (en)
[origin: EP2182308A2] Fridge with multiple independent compartments, characterised in that it is a fridge that includes multiple independent compartments, of which at least one (1), is devised to preserve food and beverages, or any other type of organic matter at room temperature (like a cooling cabinet and wine cellar compartment), this being the most distinctive element of these fridges. These fridges may contain from one or two compartments and up to three or four (or even more), all of them independent, being spaces that can be opened and closed with doors, or in the form of a drawer. Furthermore, the fact of having multiple independent compartments allows a greater energy optimization. It is also characterised by its avant-garde designs unlike traditional fridges.
