Abstract (en)
[origin: EP2182316A1] The device (1) has a tube (10) covering a close defense ammunition (2) after fixation of the defense ammunition on a base (3) of the device. The tube is connected to the base by an attachment, and carries an articulated rifle rest (15) allowing elevation orientation of the device. A recoil shock absorber has an axial stop made of elastomer and arranged between a stand (17) and a cylinder connected to the base. The base is connected to an electrical generator (5) to assure shooting of the ammunition. The absorber has a spring authorizing pivotment of the stand with respect to the base.
