Abstract (en)
A specimen analyzing apparatus comprising: a detector for detecting component information regarding a component in a specimen contained in each of analyzing containers, the analyzing containers comprising first and second analyzing containers; an analyzing part for analyzing the component information detected by the detector; a transporting device for transporting specimen containers each containing a specimen, the specimen containers comprising first and second specimen containers; an operation mode selecting means for selecting one of a first operation mode and a second operation mode; a first supplying device for supplying the specimen of a first amount; a second supplying device for supplying the specimen of a second amount greater than the first amount; and a supply controlling means for controlling the first and second supplying devices in accordance with an operation mode selected by the operation mode selecting means, is disclosed. A specimen analyzing method is also disclosed.
