Abstract (en)

[origin: EP2182589A1] The covering has a cover (10) tiltably attached to a guide part (12) that is adjustably arranged in a receiver of a housing e.g. junction box, in an insertion plane. The cover aligns with the guide part in the insertion plane in its opening position and is insertable together with the guide part into the receiver such that the cover is present in the receiver. The guide part is pulled into the receiver until the cover is completely present outside the receiver and is tiltably against the guide part in a closing position. The receiver is designed as a housing case.
