Abstract (en)

[origin: EP2182778A1] The method involves connecting the current supply inlet with a phase line (1). The controller has a control input (10) connected with another phase line (5). The pulse length coded signals or pulse height coded signals are emitted by the latter phase line, which are decoded by the controller and are used for controlling the lamp. Independent claims are included for the following: (1) an outdoor lamp, particularly street lamp with a control unit; and (2) a line system for an outdoor lamp, particularly street lamp.
