Abstract (en)

[origin: WO2009024694A2] The invention relates to a stopper valve for a fluid product dispensing member (4), the valve including a substantially rigid main body (2) and an elastically deformable membrane (3), the body and the membrane being made of chemically compatible materials so that the material of the membrane adheres to the material of the body, the body defining an anchoring area (24) and an area for the flow of the fluid product (25), characterised in that the membrane (3) adheres to the anchoring area (24) and extends on the flow area (25), the flow area including an interface that is connected to the flow area but does not adhere to the membrane in order to define an outlet channel (1) for the fluid product between the interface and the membrane in the presence of a pressurised fluid product.
