Abstract (en)
[origin: WO2009015743A1] In a rail system (70), the rail joints (4) are bridged by a connecting element (52, 64, 74, 77), wherein the rail ends (5a, 5b, 72, 73) are oriented flush with one another and can be displaced in the direction of the rails. The rails (71) and the connecting element (52, 64, 74, 77) are embodied in such a way that no interruption is produced in running faces (42, 42a, 42b, 43, 43a, 43b, 58a, 58b) at the rail joint (4).
