Abstract (en)  
[origin: WO2009027297A2] The invention relates to a method for producing composite fiber materials by using at least one hydrolytic protein mixture and at least one polyamine- or polyimine-containing binder or any mixture of said binders for producing the composite fiber materials. The invention further relates to the use of at least one hydrolytic protein mixture and at least one polyamine- or polyimine-containing binder or any mixture of said binders alone or combined with at least one other binder or at least one auxiliary agent or at least one other binder and at least one auxiliary agent for producing composite fiber materials. The invention also relates to composite fiber materials that can be obtained by way of a method wherein at least one hydrolytic protein mixture and at least one polyamine binder or at least one polyimine binder or at least one polyamine-containing or polyimine-containing binder or any mixture of said binders is used for producing the composite fiber materials.
