Abstract (en)

[origin: WO2009030384A1] According to the invention, the entire optical element (2) is lowered during the journey or transport of the vehicle. The lowering of the optical element is carried out by means of at least three spindles (3) or at least one spindle and three guide elements. Said optical element (2) is secured to a plate (4) that can be lowered into a transport position along the guides and then lifted again into the working position. The plate (4) can be blocked in both positions. Pins can also be used for blocking and also for centering the plate (4) in both end positions.
