Abstract (en)

[origin: WO2009033946A2] The invention relates to an identification device (1) for electrical lines (11), comprising a support plate (2) which is provided with at least one line receiving element (5) and a pressure lever (3) that is pivotably coupled to one side of the support plate (2). Said pressure lever (3) can be locked with the support plate (2) on the side opposite the pivoting axis, wherein the line receiving element (5) is disposed on the inner side of the support plate (2) relative to the locked state of the pressure lever (3) and is facing said pressure lever (3). According to the invention, at least the pressure lever (3) has a flexible and elastic configuration.
