Abstract (en)

[origin: EP2184002A1] The basket has bearing elements (8, 9) pivoted between two positions, and a holding mechanism (14) retaining around the bearing elements in one of the positions. An anchor (13) is arranged at the bearing elements, where the anchor is retained in the position by the holding mechanism with a vertically movable locking bar (16) that is arranged and raised in a side wall of the basket. The bar is raised by the deformation of a return spring that is made up of plastic. The anchor is retained in the position of the bearing elements by a separator (22) of the bar, and is released by the bar.
