Abstract (en)

A device (1), particularly for conveying a product into a container (2), comprising a magazine (8), having a substantially square or rectangular plan shape, which can be arranged above the container (2) and in which a pressing head (26) is associated slidably; the magazine (8) has first means adapted to vary selectively its volume, maintaining for the magazine (8) a same geometric configuration. The pressing head (26) has second means that are adapted to vary its useful thrust surface as the volume of the magazine varies.
