Abstract (en)

[origin: EP2184386A2] The present invention provides a technique allowing facilitation of operations performed on the first floor, for example, setting of filament yarns in a take-up winder. The take-up winder 1 includes a spinning section 2 located on the second floor to spin filament yarns Y, a take-off section 3 taking off the filament yarns Y spun by the spinning section 2, from the spinning section 2, and a winding section 4 located on the first floor to wind the filament yarns Y taken off by the take-off section 3. The take-off section 3 and the spinning section 2 are arranged on the same, second floor.
