Abstract (en)
[origin: US2010281798A1] The baseboard has a side with a first contour and an opposite side with a second contour. In order to be able to mount the baseboard in either of two 180°-rotated positions, the baseboard has a longitudinally extending axis of symmetry. The first contour in a first edge region, rotated through 180° about the axis of symmetry, corresponds to the second contour in a second edge region. Moreover, the second contour in the first edge region, rotated through 180° about the axis of symmetry, corresponds to the first contour in the second edge region.
