Abstract (en)  
[origin: EP2184427A2] The actuation device has an operating part (1) with a gripping section (12) e.g. elongate handle or elongate gripping element, and a transmission element (9) pivotably attached to a fastening part around an axis (A). The operating part is attached to the fastening part by an elongate joint- or plug connection. The joint- or plug connection is formed by tubular projections (11) at the operating element and the transmission element, where the projections slide into each other. A closing cylinder is accommodated in a receiving area within the projections.
