Abstract (en)
The present invention refers to a drying device arranged inside a cabin (11) of a varnish and/or other material drying plant and equipped with a single group (26) of drying panels (27). Such a group of drying panels can move according to six degrees of freedom: a first motion along the direction (X) of longitudinal development of the cabin (11), a second motion along the direction (Y) orthogonal to the direction (X) and parallel to the floor of the cabin, a third motion along a vertical direction (Z), and three rotations around three axes which are orthogonal to one another, and are respectively an turnover axis (R) parallel to the direction (X), a revolution axis (B) orthogonal to said turnover axis (R), and lying on an stably vertical plane, and a rotation axis (G) orthogonal to said two revolution (B) and turnover (R) axes.
