Abstract (en)
[origin: EP2184728A1] The device has a light-conducting element (2) inserted in a recess e.g. watch dial, and a holding device (3) for a printed circuit board (4) provided on a rear surface of a front plate (1). The board has a side that is turned towards the front plate, and arranged on an arrangement of recess in the front plate or in arrangement of the light-conducting element. The holding device and the board are elastically formed such that light-conducting element arranged between light elements and the recess is pressed by the light elements in the recess and held in the recess.
