Abstract (en)

[origin: EP2184756A1] The condition monitoring device (1) has a switch actuating element (14) brought in a fail-safe-position by excessive force on an actuator against an effect of a locking mechanism. The switch actuating element is not transferred from the fail-safe-position to another position by the actuator. The condition monitoring device signals a held condition of a protection device in the fail-safe-position.
