Abstract (en)

[origin: WO2009027319A1] The invention relates to a method for operating a dishwasher at least comprising a washing container (2), at least two spray devices (5, 6) situated inside the washing container (2), a circulating pump (7) for delivering liquid to the spray devices (5, 6), a first drive (15) for driving the circulating pump (7), a reversing device (14), by means of the position of which the circulating pump (7) delivers liquid to one of the two and/or to both spray devices (5, 6). The method comprises the following steps: adjustment of the position of the reversing device (14); and detection of the current position of the reversing device (14) on the basis of at least one operating parameter that is assigned to the first drive (15).
