Abstract (en)  
[origin: WO2009037159A1] The invention relates to a vibratory grinding mill (1), in particular a vibratory disk mill, with a grinding unit (2), wherein the grinding unit (2) has a lowerable grinding base (5) and a discharge base (12), and wherein, furthermore, the discharge base (12) has an all-round discharge channel (24), for delivering the grinding material to a and/or through a discharge element (25), and, in respect of advantageous development, proposes that the discharge channel (24) is designed to slope down in the direction of the discharge element (25).
