Abstract (en)  
[origin: WO2009018829A1] The pane element (1) of the window is bordered by a border element which is provided with the necessary means for attachment and operation of a screening device (43). The border element (2) is preferably made from polyurethane by moulding around the pane element so that edges of one or both sheet elements are encased in the moulding material. In the embodiment shown, the border element (2) surrounds the entire border of the pane element, but it is to be understood that it may also be U-shaped surrounding the pane on three of its four sides.
