Abstract (en)  
[origin: WO2009030608A1] Subassembly (100) having a threaded pin (1), which comprises an external thread (3), and having a screw-connection element (4), which comprises a hole (7) of which the diameter is smaller than the external diameter of the external thread (3), wherein the ratio between the diameter of the external thread (3) and the diameter of the hole (7) and/or the materials selected for the threaded pin (1) and for the screw-connection element (4) and/or the geometry of the external thread (3) are selected such that a predetermined torque is necessary in order for the screw-connection element (4) to be screwed onto the threaded pin (1) and/or for the threaded pin (1) to be screwed into the hole (7) in the screw-connection element (4).
