Abstract (en)
[origin: EP2031469A1] The timepiece has a movement provided in a housing (10), and a piece of glass (14) for closing the housing. A dial is provided between the movement and the glass and assumes a state in which elements located behind the dial opposite the glass are visible from a glass side and another state in which the elements are hidden. Display members are provided between the dial and the glass, and a lid (18) is movably mounted relative to the housing and kinematically connected to a mobile part for urging the dial from the one position to another position and from one state to another state.
