Abstract (en)  
[origin: WO2009021242A2] The financial decision system provides for real-time calculation of buying pressure and selling pressure for any tradable instrument market. Additionally, it provides real-time visual simultaneous plots and charts of buying pressure and selling pressure. Further, the system automatically presents buy and sell indicators and expert commentary based on automatically detected market trend changes. The system automatically analyzes market trends and changes in multiple timeframes simultaneously to identify, in real time, multiple confirmations of suggested trading actions, such as buying or selling. The system also encompasses training materials and methods necessary for teaching concepts and methods of usage to improve the likelihood of success for new users.
