Abstract (en)  
[origin: WO2009023483A1] A method for organizing communication records on an electronic communication device is useful for efficiently displaying and reviewing communication records. The method includes processing incoming communications received from a plurality of contacts (405), and processing outgoing communications transmitted to the plurality of contacts (410). A plurality of electronic folder names is then sorted according to predetermined parameters (415). Each folder name in the plurality of electronic folder names is associated with a contact in the plurality of contacts. The plurality of electronic folder names is then displayed (420). Finally, in response to a selection of a folder name in the plurality of electronic folder names, both incoming communication records of the incoming communications and outgoing communication records of the outgoing communications associated with a contact in the plurality of contacts are displayed (425).
