Abstract (en)

[origin: EP2186743A1] The bag has a resealable closure (4) arranged in a head region and extending in a transverse direction. The closure includes connection lugs (7a, 7b) adjacent to profile strips (6a, 6b) e.g. spring elements, where the closure is connected with a bag film (3) at a bag inner side using the lugs. Lateral folds (2) form a chute in an expanded position during opening of the closure. The lateral folds are covered at upper ends by the profile strips during closing of the closure. The lugs directly lie at and connected with a front wall (1a) at an end (9) of the closure.
