Abstract (en)

[origin: CA2724437A1] The inventive cover-container for self-contained mixing comprises a body consisting of side walls, a bottom and a sealing surface which form the inner space of the body, in which space an insert interacting with the bottom is disposed. The body is provided with a mechanism for jointing to a vessel stopper ring, the bottom or the side wall of the body is corrugated, and the sealing surface is in the form a film which is sealingly jointed to the side walls. The aim of the invention is to design the novel structure of a cover-container which provides aseptic conditions for dissolving or mixing substances in a liquid contained in the vessel and reliably insulates the vessel content from environment.
