Abstract (en)
[origin: EP2186758A1] The carrier (T) has an endless-ascending conveyor placed in a slopy plane. The conveyor includes a conveyor element (10) i.e. toothed belt, which runs above a lower deflection device (14) and an upper deflection device. An outlet region is provided above a supply path. A drive (M) is movable and/or deformable from a position perpendicular to an outer side of the conveyor element in and/or against a conveying direction (16) and relative to the conveyor element in an elastically resettable manner. Width and/or supply angle of the supply path is adjustable.
