Abstract (en)  
The present invention provides a tape cutting dispenser comprising a body (110), a pair of a holders (170) and a cutting device (200). The body has two opposite walls (120), each of the walls has a hole (130) and an accommodating space is formed between the two walls (120). The holder (170) is disposed in the hole (120). Each of the holders (170) has a protruding portion (172) protruding toward the wall (120) along an axial direction (A) and further has an elastic element (180). The elastic element (180) has axial flexibility and the elasticity bending away from the axial direction, such that the protruding portion (172) of the holder (170) is recoverably bendable away from the axial direction. The cutting device (200) is disposed on the body (110) opposite to the accommodating space (150).
