Abstract (en)

[origin: WO2009036882A2] The invention relates to a device having a guide unit for guiding an extractable furniture part that is movable relative to a corpus, wherein the guide device comprises a corpus rail, an extraction rail, and a central rail acting between the corpus rail and the extraction rail, wherein the guide unit comprises first bearing means between the central rail and the corpus rail and second bearing means between the central rail and the extraction rail, each comprising a base body and rolling means incorporated thereon or therein for mounting the rails in a movable fashion relative to one another, and synchronization means are present for synchronizing the guide unit. According to the invention, the synchronization means comprise at least one synchronization element (8) that cooperates with the base body of the respective bearing means.
