Abstract (en)
    [origin: WO2009024648A1] The invention relates to a device for holding objects in place in the cargo compartments of cars or similar. The device comprises divider means (11, 12, 13) for limiting the movement of objects in the cargo compartment and attachment means (14, 15, 16), for attaching the divider means to the walls of the cargo compartment in a detachable manner. According to the invention, the divider means comprise a first and a second rigid elongated divider element, the length of which can be separately adjusted and both of which are attached rotatably to a third rigid divider element, so that the third elongated divider element can be attached in an essentially vertical position to the first wall of the cargo compartment, with the aid of bidirectionally pivoted attachment means comprising Velcro surfaces and the first and second divider elements can then be attached, with the aid of the attachment means, to the walls adjacent to the first wall of the cargo compartment. The invention achieves practical means for safely transporting objects particularly of a difficult shape in the felt-surfaced cargo compartments of cars.
