Abstract (en)

[origin: WO2009033994A1] The invention relates to a method for erecting concrete structures, said concrete structures being in contact with salt water at a later point in time or being erected in salt water. According to the invention, aggregates are used that have the same salt content as the seawater. Seawater is used as the mixing water. The invention allows the ship-based erection of durable concrete structures at sea with only little need for transportation.
