Abstract (en)

[origin: WO2009039933A1] A description is given of a pivoting lever which can be locked in a pivoted-in position in a hollow (48), comprising a locking device (30) which is accommodated in the pivoting lever (16) and can be unlocked via an access opening (54) in the pivoting lever (16), wherein the access opening (54) can be rendered inaccessible by means of a covering (26), and wherein, according to the invention, the covering (26) can be blocked mechanically, in particular electromechanically, in its covering position.
