Abstract (en)
[origin: WO2009018828A1] In the window, a part of the pane projects over the frame, making it invisible from the interior in the mounted state, and at least one sheet element is provided with a functional mask on a surface thereof, the mask being provided on the invisible part(s) of the pane. The mask may be used for separating parts of the pane serving different functional purposes. For instance, a masking strip (32) separates the upper part (31) from the lower part (33). The upper part may serve the common purpose of windows to transmit light to the interior of the building, whereas the lower part may be fitted with a photo-voltaic element supplying electricity to other functional elements.
