Abstract (en)
[origin: CA2698478A1] The invention relates to an engine pump assembly (1), in particular a main coolant pump, composed of a housing (4) of a rotary pump with delivery means arranged therein, a heat barrier part (6), a motor part (5) which drives the delivery means, and force-transmitting connecting elements (7) between a housing flange (8) of the housing (4) of the rotary pump and a flange (21) of the engine part (5). For faster and reliable assembly and disassembly, the housing flange (8) is provided, over at least half of the periphery, with receptacles (12) for the arrangement of screw heads (13, 15) of the connecting means (7), which screw heads (13, 15) are held in a bayonet-like manner in said receptacles (12).
