Abstract (en)
[origin: WO2009018877A1] The invention relates to a damp-proof lamp having a base pan (2) and a light-permeable cover (8) mounted in a detachable fashion on the base pan (2). The base pan (2) has an at least partial inner layer (4) and an outer layer (5), the outer layer (5) forming an outer surface of the damp-proof lamp and being made of a more elastic material than the inner layer (4). In this manner, a damp-proof lamp is obtained with a particularly low susceptibility to dirt and from which water is particularly able to flow off. The damp-proof lamp also has particularly good properties with regard to the possibilities for exterior shape. Preferably, fastening elements (12) are provided for holding the cover (8) on the base pan (2), said fastening elements being opened and closed by a push. The outer layer is elastic such that the push for opening and closing the fastening elements may be made through the outer layer (5).
