Abstract (en)  
[origin: EP2189287A2] The press (10) has printing units (13) arranged downstream to a roll changer (12). A terminal (14) is arranged downstream to each printing unit and designed as projecting extension arm or cutting unit or folding device. A control system (15) controls and/or regulates the operation of the press. The system has a generation device (22) that automatically generates a command for automatic activation of a net counter (20) of the control system from signals existing in the operation of the press such that a number of good samples that are produced in the press are automatically countable. An independent claim is also included for a system for producing print products with a web-fed printing press.
