Abstract (en)
The present invention is to provide a card (10) with video and sound effects which mainly integrates a set of circuitry device (30) with video and sound functions including an image displaying screen (14), a sound source receiver and player (15), several operational buttons (16) set in the main body of said card, and a terminal block set (13) in the side surface of the main body in said card. The card can use the terminal block to link with the computer through the conductive wires (20) to proceed the transmission of video pictures, record the wording and sentences, songs or music into the card through the sound source receiver and player (15), and on/off the card power, image displaying screen, playing or recording the video and sound etc. functions through the operational buttons (16) such that the card can achieve and equip with a more realistic effect for affection or message delivery.
