Abstract (en)

[origin: EP2189385A1] Described is a pressure vessel (1) for air transport of packed articles included in a chamber surrounded by at least one flexible sheet. The sheet has side edges (2-1,2-2) bonded together leaving open at least part of one side edge giving access to the chamber, which at least partly open side edge (4) has inner opposing faces (5-1,5-2) at least one of which is provided with an adhesive (6). In an embodiment of the vessel one sheet end at the at least partly open side edge has an extending flap (9), which flap and/or the outer side of the sheet whereon it lands after folding are/is provided with an additional adhesive. In a further embodiment of the vessel at least one outer side of the at least one sheet is provided with at least one adhesive strip whereon the bonded inner opposing faces, after folding the sheet concerned at least one time, can be adhered.
