Abstract (en)

To reduce noise by suppressing oscillation occurring when an endless chain is rotated. In a chain gripper 12 that includes a sandwiching mechanism that sandwiches or releases a sheet, an endless chain 121 with no ends that supports the sandwiching mechanism, and a chain guide 123 that guides the endless chain 121 along a predetermined rotational orbit, the chain guide 123 includes a groove 124 that is provided to a fixed frame F as a depression and forms a rotational orbit, an inner guiding member 125a that is attached to the frame F while housing part of the endless chain 121 in the groove 124, and supports the inner side of the rotational orbit of the endless chain 121, and an outer guiding member 125b that is attached to the frame F while housing part of the endless chain 121 in the groove 124, and supports the outer side of the rotational orbit of the endless chain 121.
