Abstract (en)

[origin: EP2189558A1] The arm has a downwardly opening U-shaped carrier (1) in which a slider is arranged. A holder (3) accommodates a top roll and an adjusting device (4), where the slider is movable opposite to the carrier in a longitudinal direction and is fixable at an upper side of the carrier by the adjusting device. A contact surface of the slider has a ridge for rotationally fixed arrangement of the slider within the carrier with respect to a vertical axis and engaged with a corresponding recess of an inner surface of the upper side of the carrier for obtaining a form-fit connection.
