Abstract (en)
[origin: EP2189586A1] The plate element (10) has laterally adjacent fields (51) of a grid-shaped structure (50), where the fields form an elongated support strip (60). Individual support areas (30) are connected with each other, and are reinforced. The support strip has a solid area (70), where the laterally adjacent fields form an elongated carrier strip (80) with hollow body areas (20). An independent claim is included for a method for manufacturing a plate element, particularly concrete plate element.
