Abstract (en)
The invention relates to a metal fence for temporary protection. The fence comprises substantially flat panels (1) realised with horizontal (1a) and vertical (1b) electro-welded wire mesh, posts(2, 21, 22) to which the panels (1) are connected, and means for resting the posts (2, 21, 22) on the ground, characterised in that : the panels comprise ribs (3) which are afforded on vertical rows and which are arranged on horizontal rows and are distanced from one another to form structures, projecting from the plane of the panel, at a vertex of each of which a corresponding horizontal wire (3a) is welded. The posts (2, 21, 22) are made of metal elements a lateral surface of which exhibits at least a longitudinal opening (2a); shaped recesses (4) being afforded on the lateral side of each post (2, 21, 22), which recesses (4) are open externally by means of an opening (4a) afforded on a flange of the element delimiting the longitudinal opening (2a), which recesses (4) enable passage of and receive a section of horizontal wire (3a) and house it. The recesses (4) are distanced from one another at a same distance as a distance between the rows of ribs (3) on the panel (1).
