Abstract (en)

[origin: EP2189609A2] The covering has glass panes (1.1-1.3) connected together by spacing strips. A holding element (3) is formed by a lever-like clamping element, which includes a clamping leg (4) aligned perpendicular to a facade surface. The clamping leg is connected to a frame construction via a hinge connection (5), and carries a pressing leg (6) projecting to a front side of an insulating glass pane (1). The pressing leg is engaged in a receiving groove (7). The clamping leg is adjusted and locked at a side turned away from the connection by an adjusting element (8) running parallel to a plane of the panes.
