Abstract (en)  
[origin: EP2189748A1] The sling has an elastic tensioner (25) that is fixed inside a sheath (9) and is in the form of a closed loop sliding in the sheath. A positioning unit (31) positions ends of the loop, and is engaged with the tensioner from interior of the loop. The positioning unit has seams (33) formed between walls (27) of the sheath, inside the loop. The tensioner has a metal hoop (29) connecting ends of a rubber band for forming the closed loop. The sheath has an end provided with an attachment made of fireproof material. A metal hook removably connects an intermediate portion to the sheath.
