Abstract (en)

[origin: EP2189996A1] The device (1) has a predefined even number of separable contacts (11, 12) comprising two contacts electrically connected to connection terminals. Arc chutes (14, 15) are provided with respective arc formation chambers (41, 42). Tripping mechanisms are associated with respective pairs of separable contacts to separate the separable contacts of the pairs in response to electric faults in an electric line. The tripping mechanisms are connected to each other by a mechanical link permitting simultaneous opening of separable contacts. An independent claim is also included for a photovoltaic cell installation comprising a panel.
