Abstract (en)

[origin: EP2189999A1] The contactor (29) has a magnetic body (35) arranged between a winding support (38) and a hood (30). The body has orifices permitting passage of a portion of conducting segments of an electric winding (36) through the body for connecting the segment with an electric connection module (31) of the hood. Guiding units e.g. guiding brackets, include insertion spaces through which the portion of the segment is inserted in the guiding units. Reduction units e.g. snug, reduce diameter of the spaces to a value lower than diameter of the portion of the segment. An independent claim is also included for a method for assembling a contactor of a starting device.
