Abstract (en)
[origin: EP2190077A1] The device (1) has a rotatable phase-selection unit (2) allowing contacting of a phase conductor of a flat cable with a phase selection tapping contact (3) only in predetermined rotational positions. The selection unit is locked in the device with respect to the met phase selection during execution of the phase selection. The locking of the selection unit is not non-destructively released, where the device is non-destructively separable from the flat cable after the met phase selection and reusable under maintaining of the once met phase selection. An independent claim is also included for a method for strip-free tapping contacting of a multiphase flat cable.
