Abstract (en)
[origin: WO2009029010A1] Device (24) for transferring a fluid (22) to and/or from a fluid container (12) having a sealing member (14). The device (24) comprises a piercing member (16) for penetrating the sealing member (14) and an elongated body defining a longitudinal flow channel (18) through which a fluid (22) may flow into and/or out of the fluid container (12) and at least one opening (20) that communicates with the flow channel (18). Said at least one opening (20) is arranged to extend along at least 1% of the length (l) of the piercing member (16) to ensure that at least part of said at least one opening (20) is located substantially adjacent to the innermost side (14b) of a sealing member (14) when the device is in use.
